

A Breakthrough in Body Contouring

CelluSmooth™

SCITON®

Before & After
Results Inside!

Restore Beautiful Legs!

Cellu**Smooth** is a next-generation technology — the only laser device to effectively treat the structural components of lumpy and dimpled skin with long-lasting results.

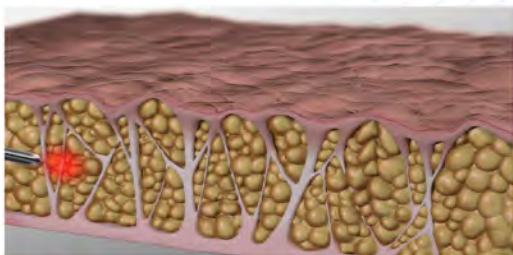

Cellu**Smooth**™

CelluSmooth™

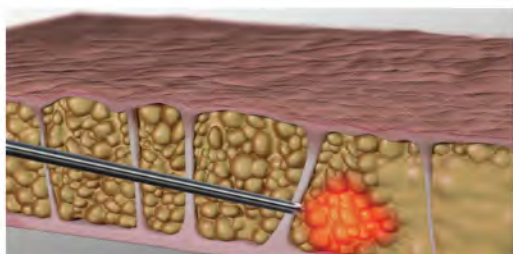

How it works

In a simple procedure, CelluSmooth treats the source of lumpy, dimpled skin with three safe and effective steps:

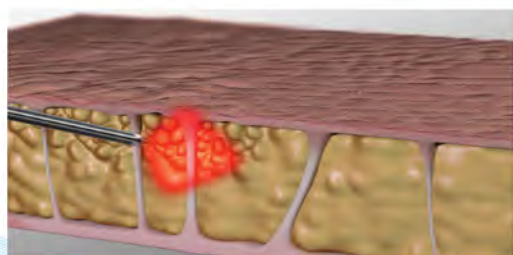

Step 1

The bands that pull on the skin and create dimples and valleys are severed.

Step 2

Next, the laser melts excess pockets of fat that form bulging areas.

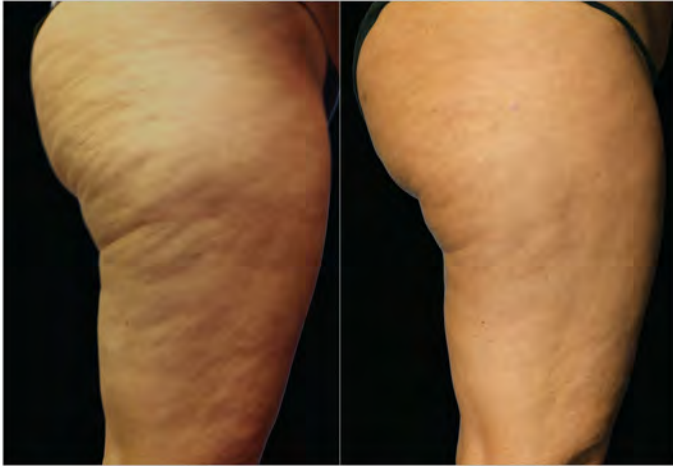

Step 3

Finally, the laser gently smooths and firms the skin.

Frequently Asked Questions

What areas can be treated?

Any area of the body where the skin has a lumpy appearance can be improved with a CelluSmooth treatment. Popular areas include inner and outer thighs, buttocks, abdomen, love handles and arms.

Am I a candidate for CelluSmooth?

The ideal candidate for CelluSmooth treatment is reasonably fit with localized pockets of lumpy tissue that exercise and diet alone haven't fixed.

How long does the CelluSmooth procedure take?

Depending upon the size of the area to be treated the CelluSmooth procedure will average 1 to 1.5 hours.

How many CelluSmooth treatments will I need?

Typically, only one treatment per body area is required. You will continue to see improvement in the treated areas over several months.

What does the procedure feel like?

Your doctor will numb the area to be treated with local anesthetic, so there is minimal discomfort during the procedure. Following the CelluSmooth treatment, you may experience some aches, much like after a physical workout.

What should I expect after treatment?

Immediately after CelluSmooth treatment you may experience bruising. Most patients resume normal activities shortly after the procedure. Results are typically visible within 2 – 4 weeks and will continue to improve over several months. Your doctor may suggest wearing a compression garment for a brief period.
